FOR IMMEDIATE RELEASE

**Ingersoll Rand Security Technologies Unveils
New Keyless Residential Locks and Deadbolts at PCBC 2006**

-Electronic products elevate convenience, security and value for homes-

Carmel, IN, June 20, 2006 – Ingersoll Rand Security Technologies, a leading global provider of products and services that make environments safe, secure and productive, today introduced new keyless, electronic locks and deadbolts for residential applications at PCBC, homebuilding’s premier tradeshow and conference.

With the new Schlage® Keypad Locks and Deadbolts, security professionals, homebuilders and remodelers can now outfit residences with the same patented electronic technology that was previously exclusive to the brand’s commercial products. The easy-to-install, versatile keypad products also help to accelerate the completion of residential projects while enhancing the security and style of homes.

Ingersoll Rand Security Technologies is showcasing the new convenient Schlage locks and deadbolts in PCBC South Hall Booth #0817 from June 20 – 23 at San Francisco, California’s Moscone Center.

“Families are asking for new security solutions that help them manage home access with less time, worry and complication,” says Rich Goldsbury, President, Security Systems, Ingersoll Rand Security Technologies. “The development of the new keyless Schlage Keypad Locks and Deadbolts reinforces our ongoing mission to meet the evolving needs of our customers with innovative products that provide unparalleled security, safety and convenience.”

-more-

The new keypad products are designed with the high quality Schlage customers expect and are ideal for securing entry doors, home offices, utility rooms, storage rooms and wine cellars.

Doors equipped with the new electronic locks or deadbolts remain securely locked until an approved user enters their four-digit access code using the product's 11-button keypad. For enhanced visibility and style, a blue light illuminates the buttons.

Lock and deadbolt owners also have the flexibility to add, delete or change user codes in seconds to grant or deny keyless entry to family, guests or service people. For added convenience and security, the keypad is able to store up to 19 different user-codes.

The easy-to-operate locks and deadbolts are also equipped with a nine-volt battery that has an average three-year lifespan and gives sufficient warnings when its power is low.

The keyless electronic products take minutes to install and only require a screwdriver, helping to expedite the completion of residential building or remodeling projects. In addition, they are pre-programmed with two random user codes at the factory to provide immediate accessibility. To simplify the specifying and ordering processes, the locks and deadbolts are designed to fit standard right- and left-handed door openings.

Schlage Keypad Locks and Deadbolts come in Camelot and Plymouth designs and are available with knob and lever options. Offered in eight finishes including satin nickel, satin chrome, lifetime brass and aged bronze, the locks and deadbolts can complement any home décor. These products also match other Schlage security products to help create a unified style for all locks throughout a home.

Available this summer at residential wholesalers, lumberyards, dealers and showrooms, construction specifiers can add significant value to a residential project at a competitive price point.

The new locks and deadbolts are the latest addition to Ingersoll Rand Security Technologies' complete offering of interior and exterior solutions that include keypad locks, keypad deadbolts and entry sets. For more information on the company's value-added products and services, feel free to stop by PCBC South Hall Booth # 0817 or go to www.schlage.com.
